Sales Trend Over Time

3 / 8

1

Holiday season drives peak sales

Sales spike every Nov–Dec due to year-end buying and holiday shopping. The business must prepare inventory well in advance of Q4 to capitalise on demand.

2

February is the weakest month

At \$0.06M vs \$0.35M in November, February is nearly 6× lower. Targeted promotions in this month could significantly smooth out the revenue dip.

3

Business is growing year over year

The trend line moves upward from 2014 to 2017. Even slow months improve each year — a sign of successful customer acquisition and retention.

Sales by Category

4 / 8

Sales by Category

1

Technology leads with 36.4% revenue share

Closely followed by Furniture (32.3%) and Office Supplies (31.3%). The near-equal three-way split signals a well-diversified product portfolio.

2

Revenue share does not equal profit share

Furniture generates 32% of sales but the lowest profit margin. High volume without returns means resources are not being used efficiently in this category.

3

Office Supplies drives repeat purchases

Lowest revenue share but highest transaction volume. Products like Binders and Paper create frequent buying habits and strong customer loyalty over time.

Profit by Sub-Category

5 / 8

1

Copiers & Phones are the profit champions

Both are Technology products — confirming that Technology is not only the top revenue earner but also the most profitable category by a significant margin.

2

Tables & Bookcases are actively losing money

Red bars indicate negative profit. Every Table sold results in a net loss. The more units sold, the greater the financial damage to the company.

3

Discounts above 40% destroy profitability

Tables and Bookcases regularly receive discounts exceeding 40%. Recommendation: cap all Furniture discounts at 20% maximum as an immediate corrective action.

Sales & Profit by Region

6 / 8

1

West is the strongest region overall

\$725K in sales and the best profit-to-sales ratio of all four regions. West's Technology-heavy product mix explains its superior performance. Use it as a benchmark.

2

Central has a dangerous profit gap

\$501K in sales but only \$39K in profit — a dangerously thin margin. Central is heavily discounting to win orders, eroding all profitability in the process.

3

South is under-penetrated, not underperforming

Lowest sales at \$391K but a healthier margin than Central. South needs market investment rather than a discount strategy to unlock its growth potential.

Geographic Sales Distribution

7 / 8

1

California & New York dominate the map

The two largest bubbles sit firmly on the coasts. These two states account for a disproportionate share of total revenue, forming the strongest market base.

2

Central states are largely untapped markets

States like Wyoming, Montana, and the Dakotas show minimal activity. These represent genuine geographic expansion opportunities for the business.

3

Geographic concentration is a strategic risk

Over-reliance on two states creates fragility. If economic conditions shift in California or New York, overall revenue suffers significantly. Diversification is key.

Key Takeaways & Recommendations

01

Technology = Star Category

Highest revenue AND highest profit. Increase investment, expand the product range, and prioritise Technology in all marketing campaigns going forward.

02

Tables & Bookcases = Problem

Cap Furniture discounts at 20% immediately. Every sale beyond 40% discount is a guaranteed loss. Review pricing strategy across the entire Furniture range.

03

West Region = Best Practice

Study and document West's strategies — product mix, discount policy, customer segments. Replicate these findings in the underperforming Central and South regions.

04

Q4 = Peak Season Every Year

Prepare inventory, staffing, and marketing campaigns 2 months before November. A proactive Q4 strategy can push peak-season sales 15–20% higher.
